DEL MAR, CA

Wed Aug 05 2020

This week the median list price for Del Mar, CA is \$3,198,000 with the market action index hovering around 33. This is an increase over last month's market action index of 31. Inventory has held steady at or around 53. [Click here to stay informed with the Del Mar market!](#)

MARKET ACTION INDEX

This answers "How's the Market?" by comparing rate of sales versus inventory.

Slight Seller's Advantage

Home sales continue to outstrip supply and the Market Action Index has been moving higher for several weeks. This is a Seller's market so watch for upward pricing pressure in the near future if the trend continues.

REAL-TIME MARKET PROFILE

Never miss important changes in the Del Mar market.

\$1,647,450	2,674	8,000 - 10,000 sqft	4	2	35	2	2	89

Goal of this Market Report

To provide a clear, easy-to-understand answer to "How's the market?" These reports answer this question by focusing on the 100% active market excluding pending and contingent.

Now one of the great things about this report is that it's all inclusive. You'll see that it has data for single-family homes as well as condo townhouses. By just a click of the tab you will be able to access the unique information for either.

These reports are updated weekly. The update happens over the weekend, so whenever you are looking at the report you always have the latest and greatest information.

The report is laid out in a specific way because everyone absorbs this information differently. There are 4 components that make up this report:

Our Data

Altos has a proprietary database and market analytics system that we use to prepare our market reports. While we don't disclose the specifics on how our analytics technology works, the thing to understand is we obtain our data from multiple sources including off market. There are a few key things to be aware of that makes our data a bit different than direct from your MLS. We focus on the 100% active market. Absorbed is commonly referred to as "Sold." Our "absorbed" refers to anything that differs from that 100% active state (i.e. pending, expired, removed). Things like DOM, we do active to "absorbed" (absorbed on our terms). We also provide both a 90-day average (trend) and 7-day average that may differ from what a single source provides.

REAL-TIME MARKET PROFILE	
Del Mar, CA	7/17/2020
Median List Price	\$3,246,500

Market Action	31

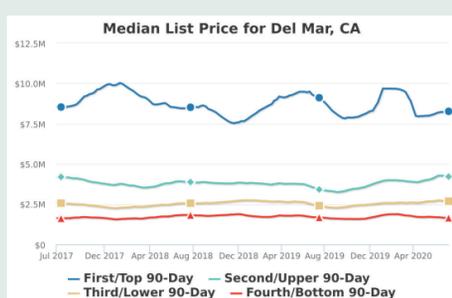

Real-Time Market Profile

This provides the latest information for the most important statistics from previous week. In addition to the data presented, you'll find spark lines (tiny charts) that provide a trend over the last 3 months so you can see how things may have changed. If you find the Real-Time Market Profile intimidating, the copy on the left side of the report is specifically based on what is provided in the Real-Time Market Profile.

Market Action Index

For all you visual learners out there, the Market Action Index is made especially for you. The MAI is our proprietary algorithm. The MAI is the thermometer of the market, the higher the number the hotter the market. It answers the question, "How's the market?" by measuring the current rate of sale versus the amount of inventory. With 30 being the base, neither buyers market nor sellers market, when the index goes above 30 it implies a sellers market. Below 30, conditions favor the buyer.

Market Action Index

Market Segments

With the segments we take all the active listings and list them from most expensive to least expensive. We then divide that by 4 so that each segment has the same amount of inventory (combine the inventory for each quartile and it will equal total inventory for said area). The "New" is any new listings over the last week. The "Absorbed" is anything that is no longer 100% active (i.e. pending, sold, expired, removed and etc.).
